# Special Class of Homo-Cordial Graphs 

Dr. A. Nellai Murugan<br>Department of Mathematics, V.O.Chidambaram College, Tuticorin, Tamilnadu, India.<br>A. Mathubala<br>Department of Mathematics, V.O.Chidambaram College, Tuticorin, Tamilnadu, India.

#### Abstract

Let $G=(V, E)$ be a graph with $p$ vertices and $q$ edges. A Homo-Cordial Labeling of a Graph $G$ with vertex set $V$ is a bijection from $V$ to $\{0,1\}$ such that each edge $u v$ is assigned the label 1if $f(u)=f(v)$ or 0 if $f(u) \neq f(v)$ with the condition that the number of vertices labeled with 0 and the number of vertices labeled with 1 differ by at most 1 and the number of edges labeled with 0 and the number of edges labeled with 1 differ by at most 1 . The graph that admits a Homo-Cordial Labeling (HoCL) is called Homo-Cordial Graph (HoCG). In this paper, we proved that the graphs $\mathbf{Z}-\left(\mathbf{P}_{\mathrm{n}}\right)$, Twig $\mathbf{T g}_{\mathrm{n}},\left(\mathbf{P}_{\mathbf{2}} \cup \mathrm{mK}_{1}\right)+\mathrm{N}_{2}$, Jelly Fish $\mathbf{J}(\mathrm{m}, \mathrm{n})$ are Homo-Cordial Graphs.

Index Terms - Twig, Jelly Fish, Homo-Cordial Graph, HomoCordial Labeling, 2000 Mathematics Subject classification 05C78.

## 1. INTRODUCTION

A graph $G$ is a finite nonempty set of objects called vertices together with a set of unordered pairs of distinct vertices of G which is called edges. Each pair $\mathrm{e}=\{\mathrm{uv}\}$ of vertices in E is called edges or a line of G. In this paper, we proved that the graphs Z-( $\mathrm{P}_{\mathrm{n}}$ ), Twig $\mathrm{Tg}_{\mathrm{n}},\left(\mathrm{P}_{2} \cup \mathrm{mK}_{1}\right)+\mathrm{N}_{2}$, Jelly Fish $\mathrm{J}(\mathrm{m}, \mathrm{n})$ are Homo-Cordial Graphs. For graph theory terminology, we follow [2]

## 2. PRELIMINARIES

Let $G=(V, E)$ be a graph with $p$ vertices and $q$ edges. A HomoCordial Labeling of a Graph G with vertex set V is a bijection from V to $\{0,1\}$ such that each edge $u v$ is assigned the label 1if $\mathrm{f}(\mathrm{u})=\mathrm{f}(\mathrm{v})$ or 0 if $\mathrm{f}(\mathrm{u}) \neq \mathrm{f}(\mathrm{v})$ with the condition that the number of vertices labeled with 0 and the number of vertices labeled with 1 differ by at most 1 and the number of edges labeled with 0 and the number of edges labeled with 1 differ by at most 1 .

The graph that admits a Homo-Cordial Labeling (HoCL) is called Homo-Cordial Graph (HoCG). In this paper, we proved that the graphs $\mathrm{Z}-\left(\mathrm{P}_{\mathrm{n}}\right)$, Twig $\mathrm{Tg}_{\mathrm{n}}$, $\left(\mathrm{P}_{2} \mathrm{U} \mathrm{mK}_{1}\right)+\mathrm{N}_{2}$, Jelly Fish $\mathrm{J}(\mathrm{m}, \mathrm{n})$ are Homo-Cordial Graphs.

Definition: 2.1
In a pair of path $P_{n}, i^{\text {th }}$ vertex of a path $P_{n}$ is joined with $i+1^{\text {th }}$ vertex of a path $P_{n}$. It is denoted by $Z-\left(P_{n}\right)$.

Definition: 2.2
A graph obtained from a path by attaching exactly two pendant edges to each internal vertex of the path is called a twig and is denoted by $\mathrm{Tg}_{\mathrm{n}}, \mathrm{n} \geq 1$

Definition: 2.3
The graph $\left(\mathrm{P}_{2} \cup m \mathrm{~K}_{1}\right)+\mathrm{N}_{2}$ is a graph with vertex set $\left\{\mathrm{z}_{1}, \mathrm{Z}_{2}, \mathrm{X}_{1}, \mathrm{x}_{2} \ldots \mathrm{x}_{\mathrm{m}}\right\} \cup\left\{\mathrm{y}_{1}, \mathrm{y}_{2}\right\}$ and edge
set $\left\{\left[\left(y_{1} z_{1}\right),\left(y_{1} z_{2}\right),\left(y_{2} z_{1}\right),\left(y_{2} z_{2}\right),\left(z_{1} z_{2}\right)\right] \cup\left[\left(y_{1} x_{i}\right) \cup\left(y_{2} x_{i}\right):\right.\right.$ $1 \leq \mathrm{i} \leq \mathrm{m}]\}$.
Definition: 2.4
For integers $m, n \geq 0$, we consider the graph Jelly Fish $J(m, n)$ with vertex set $\left.\mathrm{V}(\mathrm{J}(\mathrm{m}, \mathrm{n}))=[\mathrm{u}, \mathrm{v}, \mathrm{x}, \mathrm{y}],\left[\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}\right],\left[\mathrm{v}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}\right]\right\}$ and the edge set $\mathrm{E}(\mathrm{J}(\mathrm{m}, \mathrm{n}))=\{[(\mathrm{ux}) \mathrm{U}(\mathrm{uy}) \mathrm{U}(\mathrm{vx}) \mathrm{U}(\mathrm{vy}) \mathrm{U}(\mathrm{xy})]$
$\left.\mathrm{U}\left[\left(\mathrm{uu}_{\mathrm{i}}\right): 1 \leq \mathrm{i} \leq \mathrm{m}\right] \cup\left[\left(\mathrm{vv}_{\mathrm{i}}\right): 1 \leq \mathrm{i} \leq \mathrm{n}\right]\right\}$.

## 3. MAIN RESULTS

Theorem:3.1
Z - $\mathrm{P}_{\mathrm{n}}$ is Homo-Cordial Graph.
Proof:
Let $\quad \mathrm{V}\left(\mathrm{Z}-\mathrm{P}_{\mathrm{n}}\right)=\left\{\left[\mathrm{u}_{\mathrm{i}}, \mathrm{v}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}\right]\right\}$ and
$E\left(Z-P_{n}\right)=\left\{\left[\left(u_{i} u_{i+1}\right): 1 \leq i \leq n-1\right] \cup\left[\left(v_{i} v_{i+1}\right):\right.\right.$
$\left.1 \leq \mathrm{i} \leq \mathrm{n}-1] \cup\left[\left(\mathrm{v}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right): 1 \leq \mathrm{i} \leq \mathrm{n}-1\right]\right\}$.
Define $f: \mathrm{V}\left(\mathrm{Z}-\mathrm{P}_{\mathrm{n}}\right) \rightarrow\{0,1\}$.
The vertex labeling are,

$$
\begin{aligned}
& f\left(\mathrm{u}_{\mathrm{i}}\right)=\left\{\begin{array}{lll}
0 & \mathrm{i} \equiv 0,3 \bmod 4 \\
1 & \mathrm{i} \equiv 1,2 \bmod 4
\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}\right. \\
& f\left(\mathrm{v}_{\mathrm{i}}\right)=\left\{\begin{array}{lll}
0 & \mathrm{i} \equiv 1,2 \bmod 4 \\
1 & \mathrm{i} \equiv 0,3 \bmod 4
\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}\right.
\end{aligned}
$$

The induced edge labeling are,

$$
\begin{aligned}
& f^{*}\left[\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right)\right]=\left\{\begin{array}{lll}
0 & \mathrm{i} \equiv 0 \bmod 2 \\
1 & \mathrm{i} \equiv 1 \bmod 2 & 1 \leq \mathrm{i} \leq \mathrm{n}-1 \\
f^{*}\left[\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)\right] & =\left\{\begin{array}{lll}
0 & \mathrm{i} \equiv 0 \bmod 2 \\
1 & \mathrm{i} \equiv 1 \bmod 2
\end{array}\right. & 1 \leq \mathrm{i} \leq \mathrm{n}-1
\end{array}\right.
\end{aligned}
$$

$f *\left[\left(\mathrm{v}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right)\right]=\left\{\begin{array}{ll}0 & \mathrm{i} \equiv 1 \bmod 2 \\ 1 & \mathrm{i} \equiv 0 \bmod 2\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}-1\right.$
Here, $\mathrm{v}_{f}(1)=\mathrm{v}_{f}(0) \quad$ for all n ,
$\mathrm{e}_{f}(1)=\mathrm{e}_{f}(0) \quad$ for $\mathrm{n} \equiv 1 \bmod 2$
and
$\mathrm{e}_{f}(1)=\mathrm{e}_{f}(0)+1 \quad$ for $\mathrm{n} \equiv 0 \bmod 2$.
Therefore, $Z-P_{n}$ satisfies the conditions $\left|v_{f}(0)-v_{f}(1)\right| \leq 1$ and $\left|e_{f}(0)-e_{f}(1)\right| \leq 1$.

Hence, Z - $\mathrm{P}_{\mathrm{n}}$ is Homo-Cordial Graph.
For example, the Homo-Cordial Labeling of $\mathrm{Z}-\mathrm{P}_{5}$ and $\mathrm{Z}-\mathrm{P}_{6}$ are shown figure 3.2 and figure 3.3 respectively.

Figure 3.2:

Theorem:3.4
Twig $\mathrm{Tg}_{\mathrm{n}}$ is Homo-Cordial Graph.
Proof:
Let $\quad \mathrm{V}\left(\operatorname{Tg}_{\mathrm{n}}\right)=\left\{\left[\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}\right],\left[\mathrm{v}_{\mathrm{i}}, \mathrm{w}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}-2\right]\right\}$ and $\mathrm{E}\left(\mathrm{Tg}_{\mathrm{n}}\right)$ $=\left\{\left[\left(u_{i} u_{i+1}\right): 1 \leq i \leq n-1\right] \cup\left[\left(u_{i+1} w_{i}\right) \cup\left(u_{i+1} v_{i}\right): 1 \leq i \leq n-2\right]\right\}$

Define $f: \mathrm{V}\left(\mathrm{Tg}_{\mathrm{n}}\right) \rightarrow\{0,1\}$.
The vertex labeling are,
$f\left(\mathrm{u}_{\mathrm{i}}\right)=\left\{\begin{array}{ll}0 & \mathrm{i} \equiv 0,1 \bmod 4 \\ 1 & \mathrm{i} \equiv 2,3 \bmod 4\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}\right.$
$f\left(\mathrm{v}_{\mathrm{i}}\right) \quad=\quad\left\{\begin{array}{ll}0 & \mathrm{i} \equiv 0 \bmod 2 \\ 1 & \mathrm{i} \equiv 1 \bmod 2\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}-2\right.$
$f\left(\mathrm{w}_{\mathrm{i}}\right)=\left\{\begin{array}{ll}0 & \mathrm{i} \equiv 1 \bmod 2 \\ 1 & \mathrm{i} \equiv 0 \bmod 2\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}-2\right.$

The induced edge labeling are,
$f *\left[\left(u_{i} u_{i+1}\right)\right]=\left\{\begin{array}{ll}0 & i \equiv 1 \bmod 2 \\ 1 & i \equiv 0 \bmod 2\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}-1\right.$
$f^{*}\left[\left(\mathrm{u}_{\mathrm{i}+1} \mathrm{v}_{\mathrm{i}}\right)\right]=\left\{\begin{array}{ll}0 & \mathrm{i} \equiv 2,3 \bmod 4 \\ 1 & \mathrm{i} \equiv 0,1 \bmod 4\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}-2\right.$
$f *\left[\left(u_{i+1} W_{i}\right)\right]=\left\{\begin{array}{ll}0 & i \equiv 0,1 \bmod 4 \\ 1 & i \equiv 2,3 \bmod 4\end{array} \quad 1 \leq i \leq n-2\right.$
Here, Twig $\operatorname{Tg}_{\mathrm{n}}$ satisfies the conditions $\left|\mathrm{v}_{f}(0)-\mathrm{v}_{f}(1)\right| \leq 1$ and $\left.\mid \mathrm{e}_{f} 0\right)-\mathrm{e}_{f}(1) \mid \leq 1$.

Therefore, Twig $\mathrm{Tg}_{\mathrm{n}}$ is Homo-Cordial Graph.
For example, the Homo-Cordial Labeling of $\mathrm{Tg}_{5}$ and $\mathrm{Tg}_{6}$ are shown in figure 3.5 and figure 3.6 respectively.

Figure 3.5:

Figure 3.6:

## Theorem:3.7

$\left(\mathrm{P}_{2} \cup \mathrm{nK}_{1}\right)+\mathrm{N}_{2}$ is Homo-Cordial Graph.

## Proof:

Let $G$ be $\left(\mathrm{P}_{2} \cup \mathrm{nK}_{1}\right)+\mathrm{N}_{2}$.
Let $\quad \mathrm{V}(\mathrm{G})=\left\{\left[\mathrm{x}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}\right],\left[\mathrm{y}_{1}, \mathrm{y}_{2}, \mathrm{z}_{1}, \mathrm{z}_{2}\right]\right\}$ and

$$
\mathrm{E}(\mathrm{G})=\left\{\left[\left(\mathrm{y}_{1} \mathrm{z}_{1}\right),\left(\mathrm{y}_{1} \mathrm{z}_{2}\right),\left(\mathrm{y}_{2} \mathrm{z}_{1}\right), \quad\left(\mathrm{y}_{2} \mathrm{z}_{2}\right),\right.\right.
$$

$\left.\left.\left(\mathrm{z}_{1} \mathrm{z}_{2}\right)\right] \cup\left[\left(\mathrm{y}_{1} \mathrm{x}_{\mathrm{i}}\right) \cup\left(\mathrm{y}_{2} \mathrm{x}_{\mathrm{i}}\right): 1 \leq \mathrm{i} \leq \mathrm{n}\right]\right\}$.
Define $f: \mathrm{V}(\mathrm{G}) \rightarrow\{0,1\}$.
The vertex labeling are ,

$$
\begin{aligned}
& f\left(\mathrm{z}_{1}\right)=0 \\
& f\left(\mathrm{z}_{2}\right)=1
\end{aligned}
$$

$$
\begin{aligned}
& f\left(\mathrm{y}_{1}\right)=0 \\
& f\left(\mathrm{y}_{2}\right)=1 \\
& f\left(\mathrm{x}_{\mathrm{i}}\right)=\left\{\begin{array}{ll}
0 & \mathrm{i} \equiv 1 \bmod 2 \\
1 & \mathrm{i} \equiv 0 \bmod 2
\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}\right.
\end{aligned}
$$

The induced edge labeling are,

| $f^{*}\left[\left(\mathrm{y}_{1}, \mathrm{z}_{1}\right)\right]$ | $=$ | 1 |
| :--- | :--- | :--- |
| $f^{*}\left[\left(\mathrm{y}_{1}, \mathrm{z}_{2}\right)\right]$ | $=$ | 0 |
| $f^{*}\left[\left(\mathrm{y}_{2}, \mathrm{z}_{1}\right)\right]$ | $=$ | 0 |
| $f^{*}\left[\left(\mathrm{y}_{2}, \mathrm{z}_{2}\right)\right]$ | $=$ | 1 |
| $f^{*}\left[\left(\mathrm{z}_{1}, \mathrm{z}_{2}\right)\right]$ | $=$ | 0 |
| $f^{*}\left[\left(\mathrm{y}_{1} \mathrm{x}_{\mathrm{i}}\right)\right]$ | $=$ | $\begin{cases}0 & \mathrm{i} \equiv 0 \bmod 2 \\ 1 & \mathrm{i} \equiv 1 \bmod 2\end{cases}$ |
| $f^{*}\left[\left(\mathrm{y}_{2} \mathrm{x}_{\mathrm{i}}\right)\right]$ | $1 \leq \mathrm{i} \leq \mathrm{n}$ |  |
| $\left\{\begin{array}{lll}0 & \mathrm{i} \equiv 1 \bmod 2 \\ 1 & \mathrm{i} \equiv 0 \bmod 2\end{array}\right.$ | $1 \leq \mathrm{i} \leq \mathrm{n}$ |  |

Here, $\mathrm{v}_{f}(0)=\mathrm{v}_{f}(1)+1 \quad$ for $\mathrm{n} \equiv 1 \bmod 2$,
$\mathrm{v}_{f}(0)=\mathrm{v}_{f}(1)$ for $\mathrm{n} \equiv 0 \bmod 2$ and
$\mathrm{e}_{f}(0)=\mathrm{e}_{f}(1)+1$ for all n .
Therefore, the graph G satisfies the conditions $\mid \mathrm{v}_{f}(0)$ $\mathrm{v}_{f}(1) \mid \leq 1$ and $\left|\mathrm{e}_{f}(0)-\mathrm{e}_{f}(1)\right| \leq 1$.

Hence, $\left(\mathrm{P}_{2} \cup \mathrm{nK}_{1}\right)+\mathrm{N}_{2}$ is Homo-Cordial Graph.
For example, the Homo-Cordial Labeling of ( $\mathrm{P}_{2} \mathrm{U}$ $\left.3 \mathrm{~K}_{1}\right)+\mathrm{N}_{2}$ and $\left(\mathrm{P}_{2} \cup 4 \mathrm{~K}_{1}\right)+\mathrm{N}_{2}$ are shown in figure 3.8 and figure 3.9 respectively.

Figure 3.8: $\left(\mathrm{P}_{2} \cup 3 \mathrm{~K}_{1}\right)+\mathrm{N}_{2}$

Figure 3.9: $\left(\mathrm{P}_{2} \cup \mathrm{~K}_{1}\right)+\mathrm{N}_{2}$
Theorem: 3.10
Jelly Fish $\mathbf{J}_{\mathrm{m}, \mathrm{n}}$ is Homo-Cordial Graph.
Proof:
Let $\quad \mathrm{V}\left(\mathrm{J}_{\mathrm{m}, \mathrm{n}}\right)=\left\{[\mathrm{u}, \mathrm{v}, \mathrm{x}, \mathrm{y}],\left[\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}\right],\left[\mathrm{v}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}\right]\right\}$ and $\mathrm{E}\left(\mathrm{J}_{\mathrm{m}, \mathrm{n}}\right) \quad=\quad\{[(\mathrm{ux}) \mathrm{U}(\mathrm{uy}) \mathrm{U}(\mathrm{vx}) \mathrm{U}(\mathrm{vy}) \mathrm{U}(\mathrm{xy})]$ $\left.\mathrm{U}\left[\left(\mathrm{uu}_{\mathrm{i}}\right): 1 \leq \mathrm{i} \leq \mathrm{m}\right] \cup\left[\left(\mathrm{vv}_{\mathrm{i}}\right): 1 \leq \mathrm{i} \leq \mathrm{n}\right]\right\}$.

Define $f: \mathrm{V}\left(\mathrm{J}_{\mathrm{m}, \mathrm{n}}\right) \rightarrow\{0,1\}$.
The vertex labeling are ,
$\begin{array}{lll}f(\mathrm{u}) & = & 1 \\ f(\mathrm{v}) & = & 0\end{array}$
$f(\mathrm{v})=0$
$f(\mathrm{x})=0$
$f(\mathrm{y}) \quad=\quad 1$
$f\left(\mathrm{u}_{\mathrm{i}}\right)$
$=\left\{\begin{array}{ll}0 & i \equiv 0 \bmod 2 \\ 1 & i \equiv 1 \bmod 2\end{array} \quad 1 \leq i \leq m\right.$
$f\left(\mathrm{v}_{\mathrm{i}}\right) \quad=\left\{\begin{array}{ll}0 & \mathrm{i} \equiv 1 \bmod 2 \\ 1 & \mathrm{i} \equiv 0 \bmod 2\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}\right.$
The induced edge labeling are,
$\left.\begin{array}{ll}f^{*}[(\mathrm{ux})]= & 0 \\ f^{*}[(\mathrm{vy})]= & 0\end{array}\right] \begin{array}{ll}f^{*}[(\mathrm{xy})]= & 0 \\ f^{*}[(\mathrm{uy})]= & 1 \\ f^{*}[(\mathrm{vx})]= & 1 \\ f^{*}\left[\left(\mathrm{uu}_{\mathrm{i}}\right)\right]=\left\{\begin{array}{lll}0 & \mathrm{i} \equiv 0 \bmod 2 \\ 1 & \mathrm{i} \equiv 1 \bmod 2 & 1 \leq \mathrm{i} \leq \mathrm{m}\end{array}\right. \\ f^{*}\left[\left(\mathrm{vv}_{\mathrm{i}}\right)\right]=\left\{\begin{array}{lll}0 & \mathrm{i} \equiv 0 \bmod 2 & 1 \leq \mathrm{i} \leq \mathrm{n} \\ 1 & \mathrm{i} \equiv 1 \bmod 2 & \end{array}\right.\end{array}$

## International Journal of Emerging Technologies in Engineering Research (IJETER)

Case 1: m-even and n-even
Here, $\quad v_{f}(0)=v_{f}(1) \operatorname{ande}_{f}(0)=e_{f}(1)+1$.
Case 2: m-odd and n-odd
Here, $\quad \mathrm{v}_{f}(0)=\mathrm{v}_{f}(1)$ and $\mathrm{e}_{f}(1)=\mathrm{e}_{f}(0)+1$.
Case 3: m-even and n-odd
Here, $\quad \mathrm{v}_{f}(0)=\mathrm{v}_{f}(1)+1$ and $\mathrm{e}_{f}(0)=\mathrm{e}_{f}(1)$.
Case 4: m-odd and n-even
Here, $\quad v_{f}(1)=v_{f}(0)+1$ and $e_{f}(0)=e_{f}(1)$.
Therefore, Jelly Fish $\mathrm{J}_{\mathrm{m}, \mathrm{n}}$ satisfies the conditions $\left|\mathrm{v}_{f}(0)-\mathrm{v}_{f}(1)\right| \leq 1$ and $\left|\mathrm{e}_{f}(0)-\mathrm{e}_{f}(1)\right| \leq 1$.

Hence, Jelly Fish $\mathrm{J}_{\mathrm{m}, \mathrm{n}}$ is Homo-Cordial Graph.
For example, the Homo-Cordial Labeling of $\mathbf{J}_{2,4}, \mathbf{J}_{3,5}$, $\mathbf{J}_{2,5}$ and $\mathbf{J}_{3,4}$ are shown in figure 3.11,

Figure 3.12, figure 3.13 and figure 3.14 respectively.

Figure 3.11: $\mathrm{J}_{2,4}$

Figure 3.12: $\boldsymbol{J}_{3,5}$

Figure 3.12: $\mathrm{J}_{3,5}$

Figure 3.14: $\mathrm{J}_{3.4}$

## 4. CONCLUSION

Homo-Cordial is derived from the concept of Discrete Mathematics, which has wide applications in the field of Digital Technology. It is identified, in this paper, some graphs are satisfying Homo-cordial Labeling. In turn Graph theory has its own applications in Modern Technology. Hence, HomoCordial may have a range applications in the Digital World.
