#### Abstract

Let $\mathbf{G}=(\mathbf{V}, \mathrm{E})$ be a graph with $\mathbf{p}$ vertices and $\mathbf{q}$ edges. A Hetro-Cordial labeling of a graph $G$ with vertex set $V$ is a bijection from $V$ to $\{0,1\}$ such that each edge $u v$ is assigned the label 0 if $f(u)=f(v)$ or 1 if $f(u) \neq f(v)$ with the condition that the number of vertices labeled with 0 and the number of vertices labeled with 1 differ by atmost 1 and the number of edges labeled with 0 and the number of edges labeled with 1 differ by atmost 1 . The graph that admits a Hetro-Cordial labeling is called a Hetro Cordial Graph (HeCG). In this paper, we proved that path related graphs Path $P_{n}$, Comp $P_{n} \Theta K_{1}$, Fan $P_{n}+K_{1}$, Double fan $\mathbf{P}_{\mathbf{n}}+\mathbf{2 K} \mathbf{1}$, Ladder $\mathbf{P}_{\mathbf{n}} \mathbf{X ~ K} \mathbf{K}_{\mathbf{2}}$ are Hetro-Cordial Graphs.

## 1. INTRODUCTION

A graph $G$ is a finite nonempty set of objects called vertices together with a set of unordered pairs of distinct vertices of $G$ which is called edges. Each pair $e=\{u v\}$ of vertices in $E$ is called edges or a line of $G$. In this paper, we proved that path related graphs Path $\mathrm{P}_{\mathrm{n}}$, Comp $\mathrm{P}_{\mathrm{n}} \odot \mathrm{K}_{1}$, Fan $\mathrm{P}_{\mathrm{n}}+\mathrm{K}_{1}$, Doublefan $\mathrm{P}_{\mathrm{n}}+2 \mathrm{~K}_{1}$, Ladder $\mathrm{P}_{\mathrm{n}} \mathrm{X} \mathrm{K} \mathrm{K}_{2}$ are Hetro-Cordial Graphs. For graph theory terminology, we follow [2].

## 2. PRELIMINARIES

Let $G=(V, E)$ be a graph with $p$ vertices and $q$ edges. A HetroCordial labeling of a Graph $G$ with vertex set $V$ is a bijection from $V$ to $\{0,1\}$ such that each edge $u v$ is assigned the label 0 if $f(u)=f(v)$ or 1 if $f(u) \neq f(v)$ with the condition that the number of vertices labeled with 0 and the number of vertices labeled with 1 differ by atmost 1 and the number of edges labeled with 0 and the number of edges labeled with 1 differ by atmost 1 .

The graph that admits a Hetro-Cordial labeling is called a Hetro-Cordial Graph (HCG). In this paper, we proved that path related graphs Path $P_{n}$, Comp $P_{n} \odot K_{1}$, Fan $P_{n}+K_{1}$, Doublefan $P_{n}+2 K_{1}$, Ladder $P_{n} X K_{2}$ are Hetro-Cordial Graphs.

[^0]Definition: 2.2
The join of $G_{1}$ and $G_{2}$ is the graph $G=G_{1}+G_{2}$ with vertex set $V=V_{1} U V_{2}$ and edge set $E=E_{1} \cup E_{2} \cup\left\{U V: u \in V_{1}, v \in V_{2}\right\}$. The graph $P_{n}+K_{1}$ is called a Fan and $P_{n}+2 K_{1}$ is called the Doublefan.

Definition: 2.3
The product $G_{1} \times G_{2}$ of two graphs $G_{1}$ and $G_{2}$ is defined to be the graph whose vertex set is $V_{1} \times V_{2}$ and two vertices $u=\left(u_{1}\right.$, $\left.u_{2}\right)$ and $v=\left(v_{1}, v_{2}\right)$ in $V=V_{1} x V_{2}$ are adjacent in $G_{1} \times G_{2}$ if either $\mathrm{u}_{1}=\mathrm{v}_{1}$ and $\mathrm{u}_{2}$ is adjacent to $\mathrm{v}_{2}$ or $\mathrm{u}_{2}=\mathrm{v}_{2}$ and $\mathrm{u}_{1}$ is adjacent to $\mathrm{v}_{1} . \mathrm{P}_{\mathrm{n}} \mathrm{XK}_{2}$ is called a ladder.

Definition: 2.4
The corona $G_{1} \odot G_{2}$ of two graphs $G_{1}$ and $G_{2}$ is defined as the graph $G$ obtained by taking one copy of $G_{1}$ (which has $P_{1}$ points) and $P_{1}$ copies of $G_{2}$ and joining the $i^{\text {th }}$ point of $G_{1}$ to every point in the $i^{\text {th }}$ copy of $G_{2}$. The graph $P_{n} \odot K_{1}$ is called a comb.

The vertex labeling are,

$$
f\left(\mathrm{u}_{\mathrm{i}}\right) \quad=\left\{\begin{array}{ll}
0 & \mathrm{i} \equiv 0,3 \bmod 4 \\
1 & \mathrm{i} \equiv 1,2 \bmod 4
\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}\right.
$$

The induced edge labeling are,

$$
f^{*}\left[\left(u_{i} u_{i+1}\right)\right]=\left\{\begin{array}{ll}
1 & i \equiv 0 \bmod 2 \\
0 & i \equiv 1 \bmod 2
\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}\right.
$$

Here, $\mathrm{v}_{f}(1)=\mathrm{v}_{f}(0)+1 \quad$ for all n and
$\mathrm{e}_{f}(1)=\mathrm{e}_{f}(0) \quad$ for all n.
Therefore, Path Pn satisfies the conditions $\quad\left|\mathrm{v}_{f}(0)-\mathrm{v}_{f}(1)\right|$ $\leq 1$ and $\left|\mathrm{e}_{f}(0)-\mathrm{e}_{f}(1)\right| \leq 1$.

Hence, Path Pn ( n -odd) is Hetro-Cordial Graph.
For example, Hetro-Cordial labeling of P5 is shown in the following fig 3.2

Theorem: 3.3
Path $\mathrm{P}_{\mathrm{n}}(\mathrm{n}$-even) is Hetro-Cordial Graph.
Proof:
Let $\mathrm{V}\left(\mathrm{P}_{\mathrm{n}}\right)=\left\{\left[\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}\right]\right\}$ and

The induced edge labeling are,
$f^{*}\left[\left(u_{i} u_{i+1}\right)\right]=\left\{\begin{array}{ll}0 & i \equiv 0 \bmod 2 \\ 1 & i \equiv 1 \bmod 2\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}-1\right.$
Here, $\quad \mathrm{v}_{f}(0)=\mathrm{v}_{f}(1)$
$\mathrm{e}_{f}(1)=\mathrm{e}_{f}(0)+1$
for all n and for all n .

Therefore, Path $\mathrm{P}_{\mathrm{n}}$ satisfies the conditions $\mid \mathrm{v}_{f}(0)-\mathrm{v}_{f}$ (1) $\mid \leq 1$ and $\left|e_{f}(0)-e_{f}(1)\right| \leq 1$.

Hence, Path $P_{n}(n$-even) is Hetro-Cordial Graph.
For example, Hetro-Cordial labeling of $\mathrm{P}_{6}$ is shown in the following fig 3.4

Theorem: 3.5
Comp Pn $\odot$ K1 is Hetro-Cordial Graph.
Proof:

Define $\mathrm{f}: \mathrm{V}\left(\mathrm{P}_{\mathrm{n}} \odot \mathrm{K}_{1}\right) \rightarrow\{0,1\}$.

The induced edge labeling are,

Here, $\mathrm{v}_{f}(0)=\mathrm{v}_{f}(1) \quad$ for all n and

$$
\mathrm{e}_{f}(0)=\mathrm{e}_{f}(1)+1 \quad \text { for all } \mathrm{n} .

Therefore, comp Pn@K1 satisfies the conditions $\mid \mathrm{v}_{f}(0)$ $\mathrm{v}_{f}(1) \mid \leq 1$ and $\left|\mathrm{e}_{f}(0)-\mathrm{e}_{f}(1)\right| \leq 1$.

Hence, Comp $\mathrm{P}_{\mathrm{n}} \odot \mathrm{K}_{1}$ is Hetro-Cordial.
For example, Hetro-Cordial labeling of P4@K1 and P3○K1 is shown in the following fig 3.6 and fig 3.7 respectively.

$f^{*}\left[\left(u_{i} u_{i+1}\right)\right]=\left\{\begin{array}{ll}0 & i \equiv 1 \bmod 2 \\ 1 & i \equiv 0 \bmod 2\end{array} \quad 1 \leq \mathrm{i} \leq \mathrm{n}-1\right.$
Here, $\quad \mathrm{v}_{f}(1)=\mathrm{v}_{f}(0)+1 \quad$ for all n and $\mathrm{e}_{f}(1)=\mathrm{e}_{f}(0)+1$ for all $n$.

Here, $\mathrm{v}_{f}(1)=\mathrm{v}_{f}(0)+1 \quad$ for all $\mathrm{n} \quad$ and $\mathrm{e}_{f}(1)=\mathrm{e}_{f}(0)+1 \quad$ for all n.
